FAIRMONT COMMENCES CHANNELING AT BUTTERCUP

- **Channeling commences along recently completed access road onto Lense A**
- **More than 400m of channeling planned**

September 18, 2014 --- Vancouver, BC --- Fairmont Resources Inc. (FMR: TSX-V) (“Fairmont”) is pleased to announce that it has commenced channeling at the Buttercup Property. This work, originally unplanned, was conceived upon the completion of the access road after excellent exposure of bedrock was uncovered during road construction.

Channeling will provide additional material for analysis and testing. Fairmont anticipates completing more than 400 metres of channeling over approximately two weeks of field work.

Photos and maps from the channeling program can be found at the link below.

“Having exposed what appears to be titanomagnetite while building the new Buttercup access road, and while the weather is still favourable, Fairmont has decided to take the opportunity to complete some channeling for additional analysis and testing” stated Michael Dehn, Fairmont’s President and CEO. “The road has uncovered a good transect across lense A, in both a north-east to south-west direction, and north-west to south-east direction, like an ‘X’. We will be able to collect a lot of material for potential customers from the channeling.”

About Fairmont

Fairmont's Quebec properties cover numerous occurrences of high-grade titaniferous magnetite with vanadium. Where these occurrences have been tested they have display exceptional uniformity with respect to grade. These occurrences are of considerable interest due to their proximity to tide water, with the Grand Anse Sea Terminal at the Port of Saguenay located within 100km of all of Fairmont's properties.
